

Taxon Report

for

the spider

Linyphia triangularis

Name: *Linyphia triangularis*

Authority: (Clerck, 1757)

Order: Arachnida: Araneae

Family: Linyphiidae

Records: 8781

First Record: 1800

Latest Record: 2017

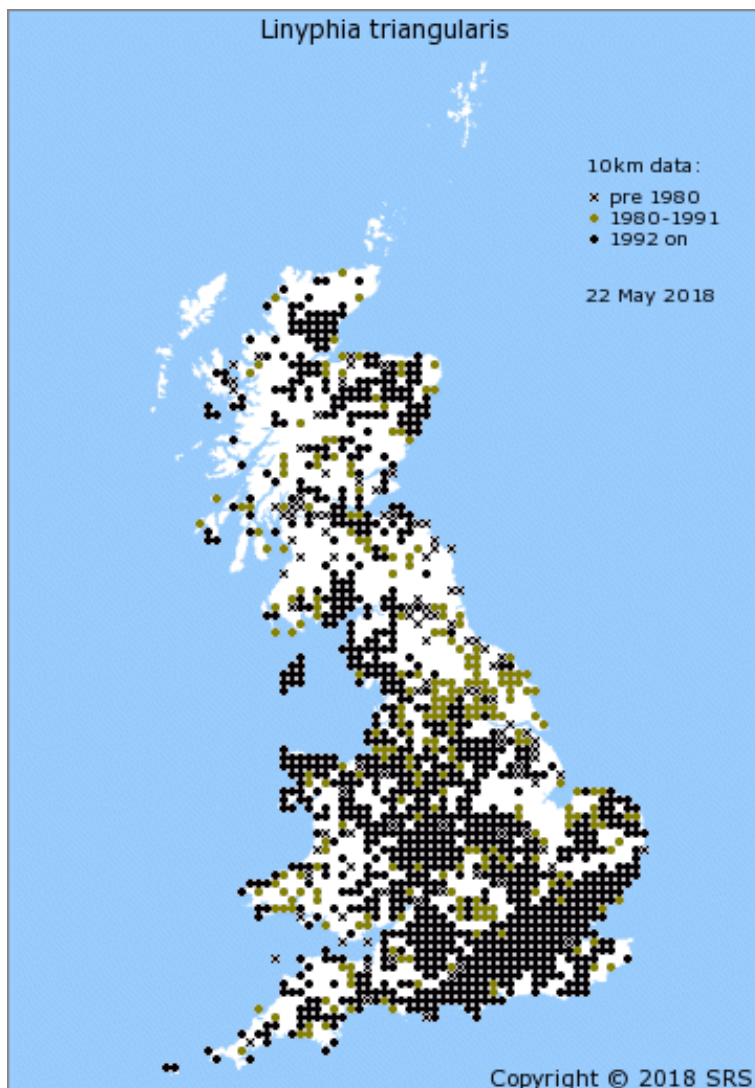

1992-on hectads: 1043

Pre-1992 hectads: 850

Total hectads: 1406

Identification difficulty: 3

Adult voucher specimen needs checking under magnification and good lighting. The Recording Scheme would accept records from experienced recorders without further question unless the date, region or habitat was especially unusual. Voucher specimen should be retained. Records accepted from known experienced recorders.

About this species

Recorded altitude range

0m to 700m

Distribution

The species is widespread in much of Britain, but scattered in northern Scotland and some other areas. It is widespread in western and central Europe.

Habitat and ecology

This spider is commonly found on lower bushes and vegetation in a range of habitats including gardens. It spins a very noticeable horizontal sheet web and awaits the arrival of prey in an upside down position on the under side of the web. The species is adult in late summer and autumn.

Status

Common.
